1. Getting started

Once you have downloaded the theme unzip it using your standard zip software. When it has finished you should have a folder with the following directories inside:

- **SmartBiz:** folder that contains the theme itself
- **Docs:** contains the documentation pdf

2. Page Layout

Each page in the theme follows HTML5 semantic markup and its compatible with the latest version of twitter bootstrap.

The general page layout consists of the following parts:

- **Header:** The website's banner and the navigation.
- **Content:** The main content of the page.
- **Footer:** The footer of the page.

2.1 Header

The header area (*<header id="masthead">*) of the page contains the page Logo and the navigation list. The navigation is designed following bootstrap's responsive rules so in smaller screens it will collapse to a responsive dropdown menu.

2.2 Content

The content area (*<div id="content" role="main">*) contains all the website's main content. It consists of several subsections (*html5 section elements*) that can be used to enclose different parts of your content.

Sections by default have a white background, however if you assign a class of "alt" (*<section class="alt">*) they will have a patterned background to contrast the normal sections. In the demo website most of the pages content area have the following pattern:

```
<section id="promo" class="alt">
    Carousels and Page supertitles, or contact page map goes here
</section>
```

```
<section>
    Normal content goes here
</section>
```

```
<section class="alt">
    related content goes here
</section>
```

```
..
..
```

We use the first section (`<section id="promo" class="alt">`) to keep the page supertitles (using bootstrap's hero units) or the carousel or even the contact page google map.

Pages can also have a left or right sidebar (`<aside class="span3 sidebar">`). The sidebar can contain one or more widgets (`<div class="sidebar-widget">`) to hold secondary content of the website.

2.3 Footer

The footer area (`<footer id="footer" role="contentinfo" class="section">`) contains the site footer. It has three columns that can be used to showcase the latest posts, recent news, latest tweets etc.

3. Customizing your site

SmartBiz is very easy to customize your website to your own look and feel.

3.1 Changing the logo

In the demo website we use text as a logo (`Smartbiz`) but you can easily replace it with your own logo image.

Make sure that the image you use is formatted as a png file to ensure better quality.

3.2 Changing the fonts

Smartbiz uses google web fonts. To change the fonts just open the **fonts.css** file (in css folder) and import any font you like from google web fonts website (<http://www.google.com/webfonts/>) or any other font you like.

3.3 Customizing the main carousel slideshow

The theme uses bootstrap's embedded carousel to ensure maximum compatibility with the framework. The carousel needs to have the following markup

```
<div id="myCarousel" class="carousel slide">
  <div class="carousel-inner">
    <div class="active item">
      Images, hero units or whatever content goes here.
    <div class="item">
      ...
```

The carousel items can be images or **any** type of bootstrap content.

3.4 Changing the theme colors.

Smartbiz comes with three color versions **blue**, **green** and **red**. To change the colors just use the appropriate class in the **body** tag.

- <body class="theme-color-blue ...">, for the blue color scheme
- <body class="theme-color-green ...">, for the green color scheme
- <body class="theme-color-red ...">, for the red color scheme

3.5 Changing the background patterns.

The theme now comes with a set of 20 background patterns from **subtle patterns** (<http://subtlepatterns.com/>). they will also look great even on a retina display.

To use any of the background patterns (like the demo site) you can additionally assign the appropriate class to the body.

- theme-pattern-lightmesh

- theme-pattern-bedge-grunge
- theme-pattern-grid
- theme-pattern-noisy-grid
- theme-pattern-subtle-grey
- theme-pattern-retina-wood
- theme-pattern-noise-lines
- theme-pattern-tiny-grid
- theme-pattern-clean-paper
- theme-pattern-farmer
- theme-pattern-project-papper
- theme-pattern-concrete-wall
- theme-pattern-wavecut
- theme-pattern-little-plus
- theme-pattern-light-honeycomb
- theme-pattern-old-mathematics
- theme-pattern-45-degree-fabric
- theme-pattern-strange-bullseyes
- theme-pattern-diamond-upholstery
- theme-pattern-subtle-stripes

To assign both a color and a pattern both classes are needed on the body tag ie.

```
<body class="theme-color-green theme-pattern-subtle-stripes">
```

You can also replace this pattern with any pattern of your taste. Just open up **theme.css** file (in css folder) and in line 39 replace the reference to the pattern.

3.6 Customizing the contact page.

Smatrbiz uses a stylized google map that can be easily customized to your own needs.

To change the location of the map just open the **script.js** file (located in the js folder) and in line 57 and 58 change the **lat** and **lng** variables to match your position.

Zoom on the map can be controlled by changing the **zoom** option in line 68.

Furthermore the saturation of the map can be changed from colored to complete black and white (as demonstrated in the demo site) by changing the value of **saturation** option in line 39 (-100 will give a black and white map, 100 will give a color map).

3.7 Customizing the footer.

Smatrbiz is very easy to customize your footer area. To add or remove columns you can follow bootstrap's login and use **span#no** accordingly. To change the footer background color Just open up **theme.css** file (located in css folder) and in line 94 change the color value to yours.

4. Support

Oxygenna will provide you with 100% support for valid purchasers of this theme via our support forum.
